*Over the last 18 months we've been working closely with our clients, sharing our data and analysis to help them calculate and pin-point the missed value from corporate action elections (in excess of \$1.3bn globally in scrip dividends alone last year) and provide the technology solution to capture it.*

*Custodians, Investment Managers and Pension Funds, provided valuable feedback to help us develop technology that is easy for them to implement and use. We consulted with portfolio managers, operations, risk and compliance and the culmination of this development work is the release of the VCP technology.*

*A trial of the VCP technology is now available as clients wanted to see the value capture in real time and get a user experience. Having beta tested with a select group of clients, the VCP technology is now ready and available to Investment Managers, Pension Funds and their Custodians, on a free trial basis.*

*Using the VCP technology or other components of our data and technology, helps clients optimise their processes, data and performance. SCORPEO has the unique expertise and resources to work with you to deliver value added solutions across the board in corporate actions optimisation.*

*If you would like to be part of the growing number of clients concerned about missing value for investors in various aspects of corporate actions, we would be pleased to discuss ideas and show you our technology.*
